### **Abstract**

Use of nematicides viz., Rugby, Tenekil and Furadan significantly reduced root knot infection on tomato plants. Maximum reduction in gall formation was produced where Rugby was used @0.03 g/kg followed by Rugby @0.02g, Tenekil @0.0181 and Furadan @ 0.12 g/kg soil. Greater increase in fresh weight of shoot was observed where Rugby was used @0.03 or 0.02 g/kg soil.
